Knowledgeable in user interface, testing, and debugging processes.

Knowledge and management of different SQL and No-SQL databases.

Lover of reading and discovering different ways to solve a problem.

Naturally curious and sure of what I do

EMPLOYMENT HISTORY

Full Stack Web Developer , Rhino   Valencia

Jul 2022 — Nov 2022

Rhino is an agency where they hired my services as a programmer and located the projects for me, I paid a commission for them and always had projects, I worked as a *Senior Full Stack Web Developer,* and I did 3 projects with them, these where:

3 Chevron human resources games, Pass words, Qatar World Cup pool and a word guess roulette, all were made in the same technological stack, React, JavaScript, express, tailwind css. In the development of these games I was in charge of a Junior Web Developer with whom I became very good friends, I took care of his code, assigned him tasks and encouraged him to raise his programming level, promoting things like using linter, correct git commits, strategies communication and more, these 3 games were made in 1 month, the repositories and websites of these can be seen on my GitHub; The last project with them was a style modernization for an insurance company in Venezuela, it was made in ASP5, it uses jQuery, bootstrap, that is, deprecated technologies, but the cost of modernizing this project was very expensive, so my work It was changing the CSS of the web, this took me 1 week, between making the design responsive, adding dark mode, and improving the UI/UX

Full Stack Web Developer, Froz   Remote work

May 2022 — Jul 2022

HOBBIES
—

Reading books, playing video games, reading programming articles, collaborating on open source projects, learning English, listening to music

LANGUAGES
—

Spanish

English

FROZ is a web platform where talented young athletes from all over the world register to apply for scholarships at universities in the United States, from all scholarships with full payment, or only parts of it.

My job was:

Planning, development, testing, implementation and maintenance of the entire web application.

- Management of front-end and back-end development in the company's systems.

- Structure and maintenance of databases.

- Modern technology stack such as React, Typescript, Express, zod, zustand, React Query, tailwindcss and more.

- Full Rest API made in Typescript, express, mongodb, zod and jwt, this was a challenge since it had to be very safe and fast as it was constantly sending data and the server resources were low, so it had to be optimal code.

It was my first full stack project where all I had to do it was a video of a model application, the technologies were left to my discretion and I used the best and most modern ones, the ones I love and master.

Frontend Developer , Rallivery   Remote Work
Apr 2022

Rallivery is a delivery company located in Italy. My work here was precise, to develop vanilla JavaScript 4 web pages based on a figma design of these. This was a challenge since I had a deadline of 4 days to make those 4 websites, it was my first project receiving an expected design, however this helped me feel confident in delivering what the client expected. After doing it, I gave the website to a friend who was doing the project in C# and was going to pass my code to aspx, Rallivery was a big project where I participated in that way.

React Frontend Developer, ISAEL - WEB3 &   Remote work
NFT
Mar 2022

At ISAEL I started collaborating with a friend who was working there and did not understand the NextJs file structure well. I helped her a couple of times in her work and she offered me to communicate with her boss; Thanks to that, I was in charge of improving the testnet of the project, this is a prototype of how the application would work, it had a base made in html and css, which I migrated to React, developed it in 6 days. I worked alone in a field that I didn't know and it was WEB3, it was a challenge to learn to use the etherjs library and use it with react, it was necessary to effectively test the application, I had 7 days to do it, and that's how it was

Frontend Developer, Web Soluciones   Remote work
Digitales
Mar 2022

Work together from a graphic designer for the development of a landing page for a digital marketing company that drives the digital image of tree cutting companies in the United States, was developed in Vanilla, HTML, CSS and JavaScript technologies based on a design in

Photoshop; it was made in 4 days with 2 weeks limit, when finished the owner of the web put it on his site in WordPress, here I worked until I was told that I had to use WordPress.

OPEN SOURCE COLLABS

LinkFree | EddieHub   Remote work
Jan 2023 — Present

EddieHub is a community of programmers from all over the world who contribute to open source through this organization. I immediately met her and I was struck by the organization and fluidity that they have to collaborate among all of them, and I saw it as an opportunity to improve my communication in a team of programmers with more and less experience in solving problems and adding new features. Currently I spend at least 3 hours a week collaborating on it.
